Title:

Comments: USFS officials:

As a frequent recreational user of the Green Mountain National Forest, and as a small woodlot owner that values high quality forest management of our state's private woodlands, I strongly oppose the Telephone Gap logging proposal as presently configured. The highest and best use of public forests is for wildlife habitat, natural carbon storage, and wilderness values.

As a private forest landowner enrolled in current use, and whose land must contribute the state's forest products economy, I resent and oppose commercial logging on the Green Mountain National Forest. The Telephone Gap proposal should be permanently shelved.
