Comments: Save the trees! We need them for carbon sequestration. This primary forest is precious and must be preserved. I have camped and hiked the forest multiple times and its wild state marks it as one of the few pristine forests in the country, and perhaps the most pristine that I have ever visited. Keeping it intact and unharmed is vital to its integrity. Even considering the destruction of any part of this forest is disgraceful. It is unbelievable that this sort of thing would be moving forward under a Dem presidency. I urge you to not let this project proceed.
