Comments: I urge you with all my heart and mind not to proceed with your plan to log 12,000 acres of old growth trees in our National Forest. This idea is exceedingly dangerous at this time of climate change.

We need the more mature trees, and if any trees need to be cut they should be the younger ones.

We in this community value who you are and what you do and yet are truly mortified at this proposed deeply unwise project which will do far more harm than good. Please stop this plan!
