Comments: Re: [External Email]Fwd: My Assessment of the NOPA

?Perry,

Thank you for your response.

Despite the tone of my recent emails, I firmly believe that we must cultivate and sustain a cooperative, mutually beneficial relationship with the National Forest Service.

My family has had a presence in Bear Creek since the early 1960s, so we've seen dramatic changes taking place in the national forest and BLM lands that border our property on three sides. We've enjoyed the ability to hunt, fish, hike and even camp in the areas surrounding our home. For most of this time, we did enjoy a strong, cordial relationship with the men and women of the forest service.

Unfortunately, this all changed in the half dozen years before the fire. During this time, as you've pointed out numerous times, camper populations grew almost exponentially each year, resulting in an increasing number of instances of property damage, pollution, the establishment of drug facilities, and destruction to the natural habitat. Despite repeated calls to the Salida District Office, most reported instances were left to Bear Creek residents to resolve.

That said, I want to believe you when you say you want to work together to identify existing problem areas and work together to solve them.

Due to health, I rarely get down to Salida in the winter, but would be willing to come down to meet with you, assuming weather conditions allow. Please let me know your availability. I'll make every effort to meet with you.

Thanks again for your response.

Glen,

We had way more questions than we could answer in the time we had but we are working on collecting those that didn't get put out there during the meeting. I can tell you are frustrated. I hear you. I have only visited the lower portion of the 101 road before snow came. How far up can one go now? Maybe we can set up a meeting out there to discuss further.

I've been told that several areas that were problem sites were closed off with boulders or fencing in the past. We have a very engaged Law Enforcement Officer so I'm surprised if you contacted us that they didn't come out to investigate and talk to the person camping you mentioned.

Its always tough when you live next to the National Forest. The Best part is you are right next to your National Forest. The worst part is there are a lot of other folks that want to use their National Forest too. My role and Pat's role is to try to manage it as best we can for all users. This does not mean for abusers.

Lets get out there and look.

Very respectfully,

Perry

Lisa, Perry,

I have reviewed the NOPA and commented on it. I also attended the "public meeting". I'm quite disappointed. The NOPA contains very little specificity, particularly with regard to HOW assessments were made, WHAT actions will be taken to mitigate existing conditions, and HOW and WHEN actions will be taken.

Question:

(1) The Notice of Proposed Action essentially ignores the area we are concerned about, stating the "Rainbow Trail" area (defined in Appendix B) receives relatively low VBDC activity. Proposed Action is to "adaptively manage".

Area residents, for the past several years, have documented and submitted evidence to the Salida FS office that the Rainbow Trail area, from Memorial Day to Labor Day, is overpopulated with unauthorized campers, as evidenced by the illegal camping sites along FS 184 that either violate engineering, hydrology, and/or fire management design criteria.

Question: Upon what evidence is the FS assessment based? E.g., assessed against what environmental conditions defined in Table 2 (road access, hydrology, engineering, botany, land/realty assessment, etc)? Where is the evidence supporting the FS assessment?

At the public meeting, in response to my question as to what will be different now under the "new" adaptive management approach, Perry you said you'll apply every resource available in the "Toolbox". Sadly, the toolbox doesn't have anything new in the way of managing illegal camping than what the forest service has done in the past. This is my gravest concern.

(2) Table 3, "Decision-making triggers for adaptive management implementation" defines conditions that, if experienced, would require FS intervention. Again, area residents have submitted substantial evidence showing that the Rainbow Trail area experiences "trigger conditions" for Fire Management, Public Health & Safety, Lands & Uses, Wildlife, and Recreation Resources. Environmental conditions in this area have been exacerbated by the Decker Fire, and the subsequent flooding experienced in the area since the fire.

Question: What actions are being taken NOW to "adaptively manage" (e.g., mitigate/repair) these existing conditions that require FS intervention?

Finally, Perry, you said you can't be everywhere at once, and that if local residents observe illegal camping activities, or find camping areas polluted with trash, human waste, open fires, etc., to call and that you'd respond immediately. We've done that in the past and have waited for days for a response from your office. For example, I called regarding a camper illegally parked more than 100 ft off the road, and next to my fence. The camper was there for more than two weeks before I called. He had disrupted my ditch, and was defecating in it, which I reported in my call. He had also broken down my fence to access my property to gather firewood. The initial response from your office took a week. When I received the call, I was told that the 14-day camping limit would start that day, and to document whether the camper left. There was no concern voiced over the fact the camper was camping more than 100 ft off the road, disrupting my ditch, and defecating in it downstream from his camp and trespassing on my land. The camper did not leave, so, after another call to your office, a ranger responded 3

days after I called. Do the math, he was there, camping illegally, for more than a month, disrupting my ditch flow, defecating in my ditch, trespassing on my land to gather firewood, and leaving all of his trash in a huge pile that I had to clean up after he was finally pushed out by the ranger. Is this what we can expect in the future.?

The above example is just one of the horror stories local area residents have documented over the past several years. Perry, we've sent you the evidence, just as we sent it to your predecessor, Jim Pitts. I'd welcome the opportunity to discuss this with both of you in person.
