Comments: I fully support replacing lifts 2 and 8, but have some issues with the other projects proposed. It seems like there are legitimate "maintenance" type projects that should be completed prior to building a new gondola. For instance, the parking lot has pot holes the size of Volkswagens and, depending on how the wind is blowing, the entire place smells like raw sewage. Seems like those issues should be addressed prior to new gondolas.

It also seems like additional water use for snowmaking should be acutely examined given availability, or lack thereof, of water resources and likelihood of availability in the future.
