Gondola:

Adding capacity to bring even more humans up the mountain will increase congestion on the road up the canyon and create a parking shortage at an already crowded base area. This ski area has grown beyond its capacity already. Environmentally, this impacts the watershed and wildlife that live there.

The 33 acre cross country ski area will encroach further into forest land that wildlife relies on for winter survival. It should continue to remain natural. I am a cross country skier and would love another location, But this is not the place for it. I'm very against this.

3. Improvements to lifts 2 and 8 are a good idea.
