Comments: As a part time resident of TSV I am in full support of this project. The traffic on Twining Rd during the busier times of the year can be heavy and poses a hazard with the amount of traffic. In the winter the road is narrow and slick with snow. In the summer the traffic increases and in addition to all of the dust people tend to drive fast. Having a base to base gondola that will run year around will help alleviate much of the Twining Rd traffic making for a better experience for all users. In addition to removing some vehicles from the road having access to the Kachina Base Area that is accessible from the Lower Base will allow for the lifts to be run in the event that Chair 1 is down for mechanical or for wind holds. With the increase in summer activities located in the Kachina Basin there will only be increased Twining Rd traffic and any way to reduce that traffic is a good idea. Please support and approve the proposed Taos Ski Valley Gondola and Other Improvements.
