Comments: Before any notion of a Greens Creek expansion is considered, the tailings-waste holding ponds MUST be made ecologically cyclable!

The planetary energy-imbalance of our profit-driven, capitalism-run-amok, misanthropic, mission we've mindlessly created, financing fossil fuel and prized mineral extraction -- the driving force and intent behind that national, run amok mission of WASTE in its irresponsible misuse of stored combustible energy and price-value. Real value wasted in both its unreciprocated, hence, over-abused use, for no-other reason but to cheapen labor costs (not to mention the waste in accidental dumping of unused energized hydrocarbons where it suffocates all emergent organic replication: The REAL value in functioning reciprocate energy of 'organic emergence' and our 'temporal aesthetics') after requiring hundreds of millions of years to be interred or removed from our ecology -- is so cheapening and distorting the Planet's system dynamo, that everyone's sense of worth is, and is currently being, belittled and demeaned... not to mention what kind of devastation it is availing the verdurous and fecund resplendence of our ("OUR"--yours, mine, and our children's) bountiful, Edenic Earth!
