Title:

Comments: I am a local dirt bike trail rider. This is a great project that is urgently needed. With all the stress that mother nature has applied to the STF in the past 10years there are thousands of trees down or potentially about to go down.

After the massive amount of snow received this winter, once the snow melts it's going to look like an atomic bomb went off. It can be very dangerous with trees down, partially down, and about to come down.

We have a local group of dirt bike riders, about 30 of us. Many of us carry GPS devices and can record locations that need attention.

Please give me a contact that can use these locations.
