Title:
Comments: I object to the drilling project. This project has the potential to completely destroy pristine delicate ecosystem. It has the potential to poison the peoples drinking water. It will destroy the landscape and erode the soil as trucks traverse where ever they please. The equipment will dramatically increase fire danger. This will raise hostility and generate animosity between the land owning residence and the forest service/ mining company. It will harm tourism and decrease land value. The forest service should be protecting this land not whoring it out.
