Comments: If they shut the French Creek down, everything on my property will suffer, the fish, the turtles, the ducks. Ducks come lay eggs every summer. Canadian geese come down every winter. I have a deer population on my property that use the French Creek to survive. I have a garden next to French Creek, if we have a pollution problem is that going to kill my garden?

Are they going to shut off French Creek for the mining? That's my concern. There's going to be no water for anything, the creek will run dry, my ponds will run dry.

There should definitely be an Environmental Impact Statement. Here in the Black Hills if their retention ponds break, it's going to ruin the eco-system of the park. At the last meeting F3 ran out the back door.

I want to send this to our Senators, and the Governor too.
