Title:

Comments: As someone who hikes 3-4 times a week in the area I support the project. The leaf and pine needle litter is quite dense and in the past, when we were under drought conditions, I worried about the forest burning. I also believe that the project will produce more "edge" which will help support the wildlife. I am also happy to know why so I was running into so many US Forest Service workers in the woods last summer. I suppose a wiser woman would have simply asked! Thanks for you work!
