Title:

Comments: My primary concern with this project is in regards to how it may affect the water table of the Rio Hondo, which passes through my property downstream from TSV. It's imperative that such construction, made for recreational purposes, don't intrude with the existing wildlife. If the amount of water in the Rio Hondo is affected by this project, or any contaminants from construction or use make their way down the river, it will not only negatively impact me and my neighbors, but the countless amount of wildlife and plant-life that exists on this river, which is absolutely unacceptable.
