Last name: Cleveland

Organization:

Title:

Comments: This project should be approved as submitted. The local impacts of the project include safer cycling/commuting options for local residents, connection to existing recreation trails that go both westbound and eastbound. Environmental impacts are minimal. Historic elk herds in the area have generally moved to other locations over the years and impacts will be no greater than the impacts the county road already assesses. The path should be 12' wide in light of the increased use of e-bikes in the area to assure safe and comfortable use of the trail that will keep people on the pavement.
