Comments: Thanks for your consideration of trail improvements.
Each of the following connections rank has high value to me as a trail enthusiast, and as someone who values single track trail experiences for hiking and biking as opposed to spending g time on roads.
1) upper cement creek
2) tent city to deer creek
3) strand bonus to 409
4) upper upper to brush creek trailhead
5) lower cement to caves
6) Reno divide trail
7) teo extension
8) budd connection
As we consider the benefits of trail use by providing options I feel we will see less car traffic, which in turn will cost less to maintain the roads! And it's just an actual trail experience!
Trailheads should also be improved to have restrooms where the single track begins to give people an excuse to stop, get out of their cars and enjoy our public lands. Each of the connections also provides small loop that can be done by lesser skilled riders. We have a need for more intermediate trails. All of which these are.
These trails should be repaired to provide more sustainable trail solutions over time requiring less frequent repairs as they do now by re-routing out of wet boggy areas to more dry terrain.
1) bear creek
2) doctors park

Thank you again for your hard work! Let's also consider the significant investment already put forth to provide single track trails in the cement creek valley and complete the trail from the caves to Crystal peak trail! This trail will be a benefit to so many as it provides a quite and often easier option to traverse a highly motorized road system!!

Kind regards,
Rob
