Comments: Please approve the mineral withdrawl! This project is very important to moving forward in a good direction. Once you approve of this you should also expand the project to for the whole rapid water creek shed. This act will take care of water that goes in Lakota people territory. The water goes into treaty lands which plays a big role in the lives of indigenous people. This water goes into the Black Hills where Lakota people have been going to for thousands of years to pray. They have been protecting these lands and waters for a very long time and if this project expands into these sacred lands then it will help indigenous people and non-indigenous people. Water is very necessary for human life and this should be approved.
