Comments: An analysis of a higher level needs to be conducted before moving forward with any project involving expansion or water development. Please preform an environmental impact statement to accurately judge how the surrounding forest and wildlife will be affected as well as how the communities downstream will be impacted.

As for the gondola, it's not needed. The draw to the backside is it's secluded from the rest of the mountain. There is no traffic on that road anyways and claiming that its installation is to prevent traffic is false. It's for the money, which will also limit backcountry access for those not interested in skiing within bounds. If anything expand parking, but keep the gondola away.
