Title:

Comments: I oppose some of the actions proposed and therefore oppose this whole proposal. I feel the proposed actions are very generic and don't actually represent a plan that the public can evaluate. Specifically, each of your actions regarding each of the parcels of the plan say basically the same thing with several action options and no details of which will be used or how they will be selected. Each says the following, "Treatment types could include clearcut, clearcut with leave tree, patch clearcut, group selection, overstory removal, salvage of dead trees, and coppice cut with leave trees." with the exception that some do not include the coppice cut wording. I fear that you will simply clearcut each parcel 100% and leave scarred ground and hillsides with no tree vegetation at all. That extreme removal of all trees would fit within your proposal and would create an ugly eyesore for the community and future recreation. Please create a more detailed and comprehensive plan and resubmit for public comment and final approval.
