Comments: I'm a full time resident in Frisco. Use all areas of the "Frisco Backyard" recreationally on a regular weekly and year-round basis. This Project # 63395 seems like a solution in search of a problem . Clear cutting 2 miles of forest will negatively change our "Backyard" for 10's of years to come. I appreciate fire mitigation but question the need on this massive scale for a "what if" possibility . These trees provide shade and cooling in the summer months, wind reduction year round, anti-avalanche/snow stability in the winter and runoff protection in the spring . It is also a wildlife habitat. Such habitat loss seems inequitable to them, locals, visitors and the esthetic of our beautiful town. Cleaning up the trails and doing enhancements that aren't really necessary seems to be a huge waste of our taxes. It's already in pristine, functioning condition. Where will we house out-of-town workers ? This is a huge overkill in my estimation and I strongly oppose its enactment !
