Title:

Comments: I request that in EIS be done prior to any expansion in Taos key valley regarding the gondola, additional restaurants, and or expansions of them, and large water catchment systems. It is a pristine area full of wildlife and should be handled carefully to ensure the continued health of wildlife and environmental systems, along with continued free public access to Williams head trail and Williams lake and surrounding areas.. I support all research that takes a close look at the impacts of these kinds of projects, including of those living downstream that rely on the water, and for it to be free of sewage, that would be coming from the ski Valley projects.
