Comments: This letter is being written in opposition to the TSV improvements. TSV has grown way too big since the Blakes sold it. We know that this growth brings more people, more pollution (air, water, noise), and very little (if any) benefit to the majority of Taos year-round residents. We are in a drought area and need all the water Mother Nature gives us for agriculture and residential use. We do not need or want the added pollution and waste put into the Hondo contaminating it. It is a waste to use electricity to make snow. Most of the people who live in the Taos area are totally opposed to the ridiculous "improvements", even those who ski. Please try considering climate change and other more important matters than making more money, more profits for a few people who don't care about the destruction they cause.
