Comments: I am sending my important response to the usfs. The DEA for the improvements to TSV is very flawed. It is not an in depth study. The firm doing the analysis is haired by the ski valley and is not a neutral arbiter. The ski valleys plan for a new restaurant doesn't consider the need for extensive plan for a large amount of water it will need. Also the affluent waste water and sewage disposal in a valley that cannot disperse this into the ground that is very rocky and doesn't drain. The DEA doesn't address the downstream impacts of so many more people, the info safe as may as 15000 or more people a day. The road to TSV is totally inadequate now to handle that amount of traffic. Environmental stewardship is the most important. The areas wildlife is already impacted by TSV. In a negative way. The watershed is very fragile and can not take any more damage from the infrastructure of TSV. The sewer plant has been out of compliance for years. The people of the Valdez valley and Des Montes and the Pueblo have suffered from the expansion of the valley for many years, from loss of water to loss of there life style. Why should the people of northern New Mexico suffer to let the 1 percent go skiing and destroy our way of life. There is no alternative plan for this expansion. Why not? All the DEA does is rubber stamp the wants of TSV a private corporation. It's goal is to make money not to protect the people's and the environment. I WILL NOT LET Taos Ski Valley destroy the beautiful valley and the fragile eco system and our beautiful and connected to nature and each other way of LIFE. Thank You
