Comments: The problems that the ski valley faced this winter delivering water throughout the village and resort are strong evidence for having a full EIS statement completed before any further construction is pursued. It is imperative the the needs of the public and the public lands are clearly understood and appropriately managed. The EA is not enough. It is not enough to only provide one solution for the changes proposed for this sensitive wilderness area and its uses. Permanent damage could occur if these changes are imposed without further study that could heavily impact downstream users and the the quality and quantity of water in the Rio Hondo forever.
