Title:

Comments: I request a mineral withdrawal for the Black Hills forest areas. For one, there are so many species endemic to this region alone. People travel from all over the country, and even the world, to witness the unique plants, birds, and animals in this area. In addition, outdoor recreation abounds. Families enjoy nature hiking, biking, rock climbing, fishing, and hunting, just to name a few. A careful balance is currently being maintained between the human and natural worlds, and this region cannot withstand the restrictions and damages that exploratory mining will almost certainly cause.

Thank you,

Allison Coin
