Comments: I believe the activities described with the project Golden Crest Exploration Drilling #62590 would lead to irreversible damage of the natural landscape, hazardous traffic conditions, and a health risk to citizens in the surrounding area through water and other natural resource contamination.

The proposed site of exploration is a popular area for outdoor recreation and tourism. The negative effects of damaging this area would greatly change culture and economy in the region. For these reasons, and more, I urge those in power to reject this proposal.
