Comments: I am writing to oppose the application for drilling due to the lack of a full understanding of the impact that it will have on the local ecosystem. Having a degree in natural resources I believe that it is important to look at all aspects when working with our surrounding and Inthibk there needs to be further studies done to know the full impact of the area. Water, livestock, unique biodiversity all need to be looked at before we decide this is good move. Thank you for thinking about a full environmental impact study.
