Title:

Comments: I am very concerned that future mining activities in the area will disrupt the natural ecosystem, disturb the landscape and have adverse long-term effects on the water quality, the environment, the natural ecosystems, and would adversely affect property, prices, and quality of life. I feel that it would be a terrible thing to alter or natural, geology and disturb the environment. I enjoy a natural beauty of the Black Hills, and would like to see it remain in its natural state. The long-term Pastor community is far greater than the gains from allowing these disruptive and potentially dangerous operations. thank you
