Title:

Comments: There needs to be a completed Environmental Assessment done on this project prior to any drilling. This partial EA has numerous probables, should, may and other similar words. These probabilities add up quickly into potential damage to the water, air, soil, and aesthetics. Each maybe, probably, could, should, etc needs a complete study conducted within the area.

A second point that needs to be considered is climate change. Few of the past studies mentioned include the increase of disasters due to climate change.

Until all of these points are looked at individually this project needs to be cancelled.
