Comments: Any type of mining or testing should not be permitted in the Black Hills!

The beauty of this place is a delicate balance and it should not be put in any jeopardy. Look at Gillette or Leads open cut. That is not beautiful, the housing market will destroy enough there does not need to be any further destruction of the beautiful nature of the Black Hills. At some point cooperate American has to stop the greed and look at the long term effects of these decisions.

I 100% say NO to any testing in the black hills! Find the resources needed somewhere else. Do not destroy this beautiful place.
