Comments: I am greatly concerned that the Midnight Project and other future projects will result the lack of responsibility and leadership as shown for the Twisp River Project and Mission Projects.

The Forest Service must prepare a full Environmental Impact Statement, and include all publics in the process, giving no special access to information and influence to the Collaborative. This so-called Collaborative, and including the Methow Valley Citizens Council, does not ensure that the public is given a meaningful voice in these decisions, and we reject being excluded from the process.

Independent alternatives should be included in an EIS, and the EIS must include a wide range of alternatives.

The cumulative Impacts of Midnight, the Twisp Restoration Project, and Mission must be analyzed.

Wildlife, our watersheds and the environment will be greatly affected if we continue to let the FS do as they please and ignore the public when we ask for an explanation as to why the prescriptions were not followed. Hampton Logging and White Logging has proven to be a disaster as they are not held accountable for not following the plan.

I greatly oppose Midnight Project and any other future Projects until more scientific research is done.
