Comments: The restoration of Silver Creek Riparian is vital to local wildlife that help keep the ecosystem of the Black Hills in balance. As wildlife help keep the land fertile and pristine. Such as the beaver which helps to keep our waterways clean and sustainable. It is essential to the Black Hills community that we have these aquatic wildlife environments clean for future generations, as it matters most that the beauty of the Black Hills remain intact for generations ahead that we won't be here to see. Thank you for your consideration!
