Title:

Comments: Asking the State of South Dakota to reconsider the detrimental impact a reservoir mining project such as this will have on the thousand of keystone species that live throughout the beautiful Black Hills region. Not only could the environmental impact be irreversible when something goes wrong-but the lives of the more than 250k residents health can be greatly impacted, as well.

Again, please consider all avenues of possibility that will follow with a project such as this. Leveraging water, minerals, toxic chemicals, spills, health hazards, well being of animal specials, plant and flora; in addition to the 250k plus residents living within the area- against financial gains is unfathomable.

Thank you for your kind consideration.
