Title:

Comments: Yes, I support the Pactola-Rapid Creek Mineral Withdrawal, Please confirm the acreage up into the whole region to include dry creek beds and stock ponds of the grazing areas for this area. The tributaries for the watersheds in the region have an extensive ecosystem that is dependent on the cleanest environment possible, all the trees in this region need to have clean water so they may produce the cleanest oxygen for all life. Please do an extensive Environmental Assessment. There is a defining area that supports life in this region from the ranchers to the future children that will have the need for the most precious and cleanest waters in the area, make a loud statement to the rest of humanity to have the ability to show the world by keeping this area of water and all life as pure and viable for generations to come no more heavy metals in the water from the run off on the land to the aquifer that we need to keep pure.
