Title:

Comments: :This pipeline makes sense for many many reasons, such as alternative heating source for a rural valley that faces extremely cold weather conditions multiple months of the year, eliminating the costly and inefficient trucking method currently used, and the proper use of public owned land.

Lower Valley Energy is a reputable customer owned company with years of expertise and positive impacts on our valley.

We plead with those in authority to make this decision to be quick and efficient with the approval, permitting and installation of the natural gas pipeline.

Go time!
