Comments: Learning about the public comment period for this proposed project on the last night that public comment is accepted seems strange as a resident of the area. This should be a far larger discussion involving much of the community. I support the continued metered expansion of the resorts available activities in the summer especially the multi use trails and mountain bike specific trails. I also support the wildfire fuels reductions as well as replacing the Sublette lift. I do not support the wholesale resurfacing of the mountain to increase ease of circulation on the ski trails and to change advanced terrain into intermediate terrain just because it doesn't fit with the customer base. To alter the very surface of the ski resort in such a massive way in many areas of the mountain would not only be an ecological disaster but also a failure to promote client safety at the same time. With porous gates that anyone can and do ski through in the winter, people looking for challenging terrain will not stay in bounds where medical care and avalanche mitigation exist, but go out of bounds where hazards abound. Please carefully consider the impact of the full approval of this project.
