Comments: Here are a couple of the pubs I mentioned:

The True cost of wildfires -

https://www.nwfirescience.org/sites/default/files/publications/TrueCostofWildfire_WFLC%20report.pdf

Here is the TNC Natural Carbon solutions article:

<https://www.science.org/doi/10.1126/sciadv.aat1869>

I missed remembered the magnitude. For the US this article says it could be ~ 21%. In the previous global assessment it was 37% - <https://forestclimateworkinggroup.org/wp-content/uploads/2018/09/Griscom-et-al-2017-PNAS-Natural-Climate-Solutions.pdf>

Here is a TEK paper by Barret and Arno 1982. <https://www.nrfirescience.org/resource/7910>

The SKT used to have a web site and CD's with substantial information.

I need to track down, I believe it was a symposium proceedings on native use of fire across the country.
