Comments: I fully agree that hazard trees must be removed, especially those in areas where people are likely to be, also along roads. I constantly worry that trees could block my ability to escape a wildfire in & around my home which is near Twain Harte. I also camp & hike in the forest and it's important that trails and camp areas are safe from falling limbs & trees. Many of our local roads are narrow and the edges can be clogged with grass, brush and trees. We all need to take care of our own properties & the county & Forest Service need to do so also.

I am also concerned that many of these projects did not get started as soon as the snow melted and so as the forest dries out the danger increases. I believe by removing hazard trees we will have a healthier & much safer forest.
