Comments: I am in 100% support of the East Boulder Amendment 004. The mining industry is what founded so many areas around the world, including the area that East Boulder is in. Without mining over the years, folks would go without so much including items needed for everyday survival as well as items for recreational purposes. As with many other things, mining takes the utmost importance in taking pride in keeping safety and the environment in the forefront. In summation, Sibanye has a proven track record of viable and responsible mining. Besides the main producer of platinum and palladium in the U.S., the mine plays such a great part in the local economy and provides excellent jobs. How would the economy be affected in the region if this permit is not issued?
