Comments: Proposed Travel Plan # 64358 has set no clear boundary to the extents of possible closures of current OSV travel areas within the NF. There needs to be a clear scope provided to public to appropriately review any potential changes to the current travel areas. This should include publicly available maps of areas open to OSV travel currently, proposed changes, as well as documentation and justification for the proposed changes. Any changes to the use and/or access to public lands should be fully transparent and forthcoming, as of late it seems many of the proposed changes to travel plans, particularly those that involve motorized use, have fallen outside the purview of the 2012 planning rules. It seems there has been a lack of transparency and collaboration on the proposed travel plan, it order to meet the objectives of b) Planning records. (1) The responsible official shall keep the
following documents readily accessible
to the public by posting them online
and through other means: assessment
reports (§ 219.6); the plan, including the
monitoring program; the proposed plan,
plan amendment, or plan revision;
public notices and environmental
documents associated with a plan; plan
decision documents; and monitoring
evaluation reports (§ 219.12).
(2) The planning record includes
documents that support analytical
conclusions made and alternatives
considered throughout the planning
process. The responsible official shall
make the planning record available at
the office where the plan, plan
amendment, or plan revision was
developed.
