Comments: Of course you should be clearing out our poor overgrown and dead areas of the forest!!!!!! The land is in dire need of PROPER management. The deadfall does not allow the animals thru and they cannot feed where they cannot get thru or have the ability to flee if they want. The dead trees are being wasted by not being harvested and used. The buildup of deadfall creates a huge amount of fuel for the fires. We do not have a humid and moist climate that would allow it to break down fast enough to be of beneficial use. Hopefully, it will also help curb the stupid bugs even though we really need more severe winters to kill them. By the way, clearing only 100 feet from the roads like they are doing in the Big Hole doesn't do much good. the whole 140,000 acres needs to be thinned out and cleared! This work SHOULD NOT BE DONE BY OUTSIDERS!!!!!! USE THIS STATES PEOPLE WHEN YOU PUT OUT THE CONTRACTS.
