Comments: This is just more mismanagement of our lands and to lock people out who enjoy using it. So no logging, grazing or maintained roads will be allowed, what better way to watch our beautiful land burn up in flames.(That's been proven time and time again) There's been studies already done that show wildlife isn't bothered by the 'noise pollution' or human presence. If managed properly, this is an ecosystem that all can enjoy and thrive. This is nothing but a CONTROL ISSUE and part of the so called climate change policy.
