Comments: I am very saddened to see that such a proposal is moving forward that would limit millions of acres of PUBLIC land and restrict outdoor recreation. I am disappointed that there was very little notice, meetings or information on these proposed changes. There should have been more time to adequately comment and the public should have input on these changes. I have tried to find out more information and mapping for these proposed changes and I have yet to find anything. Why is the USFS pushing through closures with little information available to the public and from what I can understand, these closures fall well outside of the 2012 plan guidelines. What is the reasoning behind these proposed closures?
