Comments: The High Uintas Wilderness should be dedicated to its native wildlife with limited livestock grazing. The wildlife should not have to compete for food or space or be threatened by disease from domestic animals. Grazing by domestic animals degrades watersheds and the experience of visitors seeking a Wilderness experience. Native predators should not be killed to protect sheep or cows. The SDEIS fails to disclose how many native predators-such as black bears, mountain lions, or coyotes-are killed in the High Uintas Wilderness to protect domestic sheep. The SDEIS also fails to disclose the effects continued sheep grazing has on the potential for recovering native wildlife such as wolves and grizzly bears.

Support the no grazing option as it is best for the wildlife, watersheds, recreation, and the Wilderness. At the very least, the Forest Service should close any sheep grazing allotment if the permit is waived back to the Forest Service
