First name: Laurel

Last name: Facey

Organization:

Title:

Comments: Sheep have been known over the centuries for their ability to devastate forested landscapes by their voracious appetites. Their presence can lead to major deforestation which is the very opposite condition that is needed on our planet today. Domestic sheep must not be allowed to overrun the High Uintas Wilderness to the detriment of the native ecology including the fauna and flora that belongs there and which are threatened by the presence of domestic sheep - an invasive species in that region.
