Title:

Comments: The High Uintas Wilderness should be dedicated to its native wildlife. To the extent livestock grazing is allowed, it should be limited so as to not compete with wildlife for food or space or to spread disease to native species.

Domestic sheep grazing is incompatible with recovering native bighorn sheep population.

Killing native predators should be prohibited.

The SDEIS fails to disclose how many native predators-such as black bears, mountain lions, or coyotes-are killed in the High Uintas Wilderness to protect domestic grazing. The SDEIS also fails to disclose the effects continued domestic grazing has on the potential for recovering native wildlife such as wolves and grizzly bears.

A no grazing option is best for the wildlife, watersheds, recreation, and the Wilderness. The Forest Service should close any sheep grazing allotment if the permit is waived back to the Forest Service.?

Thank you.
