Title:

Comments:

The High Uintas Wilderness should be dedicated to its native wildlife. Livestock grazing should be severely limited so as to not compete with wildlife or to spread disease to native species.

Grazing by domestic animals compromises the watersheds, fouls the water, and degrades the experience of visitors.

Domestic sheep grazing is incompatible with recovering native bighorn sheep population. doomed.

Killing native predators to protect sheep or cows should be prohibited. The SDEIS fails to disclose how many native predators, bears, mountain lions, or coyotes are killed in the High Uintas Wilderness to protect sheep and to disclose the effects sheep grazing has on the potential for recovering native wildlife.

Support the no grazing option as it is best for the wildlife, watersheds, recreation, and the wilderness. At the very least, the Forest Service should close any sheep grazing allotment if the permit is waived back to the Forest Service.?
