Comments: The SDEIS is considers two alternatives: maintain the status quo and no grazing. Very simply, the decision should end grazing in the High Uintas Wilderness in order to protect native wildlife, restore the degraded watershed, and enhance opportunities for an increasingly rare Wilderness experience. To mitigate impacts to the few affected ranchers, the Forest Service should decide to retire grazing permits that are voluntarily waived back to the agency, giving the ranchers the opportunity to seek compensation from conservation interests before the allotments are permanently closed.??
