Title:

Comments: Ten thousand years ago wild animals comprised 96% of the land vertebrate biomass while humans only 4%. Today, only 4% of the land vertebrate biomass is wild animals and a full 60% of the remainder are animals humans raise and kill for food. Since we've put a man on the moon, the human population has more than doubled while that of the wild animals has more than halved. The survivors need full protection and deserve to live and raise their families in peace. Domesticated so-called "livestock" are an invasive species and have no place in wilderness areas.
