Comments: North Fork Ranger District trail #419, fish lake trail closure should never have happened. This is an example of why the public loses trust in our forest management. This is not a wilderness area and should not be considered for inclusion. This road/trail has had motorized access since before the 1960's. This was before the current management plan was even developed. To now close it because of a lawsuit based on technical language that has been in effect over 30 years is wrong. Any elk that are impacted by this access have adjusted a long time ago. Motorized access on this trail only lasts about three months because of snow. This is one of the last mountain lakes that have motorized access for our older generation.
