Title:
Comments: I support the effort to create ruffed grouse habitat in the Daniel Boone Forest north of ZMorehead, and un fact across the whole Forest. Succession regrowth is vital for many species. I also encourage the USFS to begin salvaging the storm damaged timber so prevalent along the Sheltowee Trace. Recovering this valuable timber would help fund the repair and construction of many needed foot bridges slong the Trace.

Count me as an avid hiker, grouse hunter, and supporter of the plan to create better habitat theough logging of the Daniel Boone Forest.
